

IMPORTANT BACKTESTED PERFORMANCE DISCLOSURES

The information presented by Domain Money reflects backtested performance from 10/29/20 to 5/31/22 for Domain Core, Domain Edge, Domain Access, Domain Balanced and Domain Edge Strategies. The information presented by Domain Money reflects backtested performance from 1/29/21 to 5/31/22 for the Domain Metaverse Strategy. Performance calculations assume a buy and hold strategy and periodic rebalancing. Investment advice in connection with Domain Strategies is provided by Domain Money Advisors, LLC a registered investment advisor with the SEC. All investments involve risks, including the possible loss of capital.

The foregoing disclosures should be read in conjunction with any backtested performance and its accompanying disclosures. The performance results presented are based upon a hypothetical portfolio reflecting each strategy of Domain Money Advisors, LLC (“**Domain Money**”) for the time period shown. Domain Money’s strategies are the Domain Core strategy (the “**Core Strategy**”), the Domain Access strategy (the “**Access Strategy**”), the Domain Balanced strategy (the “**Balanced Strategy**”), the Domain Edge strategy (the “**Edge Strategy**”), and the Domain Metaverse strategy (the “**Metaverse Strategy**”) and together with the Core Strategy, the Access Strategy, Balanced Strategy and Edge Strategy, each, a “**Domain Strategy**”, and collectively, the “**Domain Strategies**”. Such results are considered hypothetical and backtested (“**Hypothetical Results**”) because although they are based on the historical prices of the securities and/or cryptocurrencies in each such Domain Strategy for the prior period shown, they do not represent actual trading of that Domain Strategy or of Domain Money for any client or client account. The Domain Strategies do not have any material performance history. Hypothetical Results, such as backtested results, are shown for illustration purposes only, are prepared and calculated in hindsight, invariably show positive rates of return, and are subject to various assumptions, selection methodologies, and other variances and differences. Hypothetical Results have not been compiled, reviewed or audited by an independent accountant or any regulatory body. Year-to-date results are measured from January 1 through the end of the month prior to the date shown. A decision to invest in a Domain Strategy should not be based on Hypothetical Results. Unless otherwise indicated, related statistical measures and calculations are based completely on the Hypothetical Results. The performance of Domain Strategies will vary and may be highly volatile. An investment should only be considered by persons who can afford a loss of their entire investment. See the Domain Money Form ADV Part 2A Brochure located in its Terms of Service and on the SEC’s IARD database at www.adviserinfo.sec.gov for a further discussion of investment risks. **Past performance, including hypothetical and backtested results, is not indicative of future results.**

Hypothetical Results are shown for illustration purposes only, do not reflect actual trading results, and should not be relied upon. Hypothetical Results have inherent limitations, some of which are described herein. They are prepared with the benefit of hindsight, do not involve financial risk or reflect actual trading by a Domain Strategy, and therefore do not reflect the impact that economic and market factors, including concentration, lack of liquidity or market disruptions, regulatory (including tax) and other conditions than in existence over the period may have on investment decisions for such Domain Strategy. The Hypothetical Results reflect the rebalancing of the hypothetical portfolios over the prior period at the discretion of Domain Money. No representation or guarantee is made that such rebalancing reflects the actual rebalancing that would have been done had the Domain Strategy been actually trading during such time. Since trades have not actually occurred, Hypothetical Results may have under-or

over-compensated for the impact, if any, of certain market factors. In fact, there are frequently sharp differences between Hypothetical Results and the actual results of the strategies they reflect. Clients should be wary and not place undue importance or reliance on Hypothetical Results and review actual trading results.

No representation is made as to the reasonableness, accuracy or timeliness of the calculations, methodologies or assumptions underlying the Hypothetical Results or that all assumptions used in achieving the results have been utilized equally or appropriately, or that other assumptions should not have been used or would have been more accurate or representative. Changes in the assumptions, selection methodologies, and characteristics would have a material impact on the Hypothetical Results and other statistical information based on the Hypothetical Results. Domain Strategies may change over time in the discretion of Domain Money, including changes in the securities or cryptocurrencies in such strategy and/or their allocations, and such changes, either by themselves or cumulatively, may not be fully or partly reflected in the Hypothetical Results. To the extent there are any material differences between Domain Money's current and future management of any Domain Strategy and the investment strategy as reflected in the Hypothetical Results, the Hypothetical Results will no longer be as representative, and their illustration value will decrease substantially. No assurance can be given that market, economic or other factors may not cause Domain Money to make such modifications to the Domain Strategies over time, which changes may result in material changes to the Hypothetical Results, which depending on the extent of the changes may reduce the representativeness and illustrative usefulness of the Hypothetical Results.

Investment decisions reflected in the Hypothetical Results were not made using the Domain Strategies under actual market conditions, and therefore cannot completely account for the impact of financial risk or other factors on the manner in which a Domain Strategy would have been managed. For example, the ability to withstand losses or to adhere to a particular trading strategy or program in spite of trading losses are material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading strategy or program in particular which cannot be fully accounted for in the preparation of the Hypothetical Results and all of which can adversely affect actual trading results. No representation is made that a Domain Strategy's performance would have been the same as the related Hypothetical Results had the Domain Strategy been in existence during such time or that such Domain Strategy will be maintained substantially the same in the future.

Hypothetical Results are net of advisory fees and exclude dividends. Hypothetical Results for the Domain Strategies as compared to the performance of the Standard & Poor's 500 Index, Bitcoin or combinations of the two are for informational and illustration purposes only. Reference or comparison to an index does not imply that a Domain Strategy will be constructed in the same way as the index or achieve returns, volatility, or other results similar to the index. Indices are unmanaged, may have material differences for comparison purposes (including the number of securities may be materially more than any strategy), include the reinvestment of dividends and do not reflect transaction costs or advisory fees.

While the Domain Money investment personnel have substantial investment experience, Domain Money is a new investment adviser which has not traded actual accounts prior to January 1, 2022. Actual trading results should be given greater importance than Hypothetical Results. No representation is made that any

client or Domain Strategy will or is likely to achieve its objectives or results comparable to those shown, including the Hypothetical Results, or will make any profit or will be able to avoid incurring substantial losses. The rate of return on investments can vary widely over time, especially for long-term investments. Certain information, including historical pricing information, is based on third-party sources which while believed to be accurate have not been independently investigated. For any questions or additional information, including a list showing the contribution of each holding to the Domain Strategy's performance during the time period, please contact Domain Money at support@domainmoney.com.
